

Nested If - Practice Tasks

Solve these 6 simple nested if problems in Python.

1. Check if a number is positive. If positive, then check whether it is even or odd.
2. Check if age is 18 or above. If yes, then check if the person has a voter ID.
3. Check if username is correct. If correct, then check if password is correct.
4. Check if a student passed (marks ≥ 50). If passed, then check if attendance is above 75%.
5. Check if ATM card is inserted. If yes, then check if PIN is correct.
6. Check if a person has a ticket. If yes, then check if seat number is valid.
